Re: International application No. PCT / CA 00 / 00971

This letter is being submitted; to indicate the differences between the claims filed and the claims amended. The claim is new. [Where originally there were 10 claims and after amendment of all the claims there are 7]: "Claims 1-10 replaced by amended claims 1-7."

Sincerely,

  
Gary R. Lister

**DESCRIPTION****Title of Invention – Golf Putting Alignment System****Technical Field**

The invention relates to the game of golf and more importantly to a golf putter having an alignment arrangement based on the position of the shaft over the centerline mark on the putter head.

**Background of the Invention**

Putting plays an important role in a successful round of golf. In order to technically execute a proper putt a golfer must be properly positioned relative to the ball and to an intended line of the putt. A putter has a striking face, which should be aligned square to the desired path of the ball travel.

It is known that an alignment centerline is placed on the top surface of the putter to aid a golfer in positioning the face of a putter square to the target line of the putt. Typically, this centerline or aiming line is perpendicular to the face and is positioned at the desired area of putter to ball impact.

In addition to having the putter face aligned to the intended target line a golfer must be in the proper position relative to the ball to have proper golf techniques. The eyes of the golfer should be over the ball so that when the ball is struck the putter is returned to the proper position to send the ball on its desired target line.

It takes regular practice to develop a putting stance and stroke to propel a golf ball on its intended target line. Golfers of all skill levels have been shown to find this eye position and putter alignment difficult to maintain over time.

An object of the invention is to provide a putter that can be used to indicate when proper alignments have been attained for stroking a golf ball.

A putter that uses a shaft to facilitate alignment of a putter head and a golfer's head relative to a ball and a desired path of ball travel is shown, for example, in the following United States of America patent 5,564,990 – Weeks.

Though such a putter has achieved popularity and commercial success, there has been a continuing need for improvement.

**Summary of the Invention**

The above object has been met by a golf putting alignment system that uses the shaft attached between the centerline mark and the toe of the putter head to facilitate proper alignment of the putter head and golfer's eyes relative to a ball and a desired path of ball travel.

Golf putting alignment system has a putter, which includes a head having a shaft portion on which an alignment mark is formed. This mark allows a golfer to use the club shaft in a manner to properly align the putter head relative to an intended path of ball travel and to align the golfer's eyes relative to the ball.

The shaft is attached to the putter head between the centerline mark and the toe of the head. The shaft is attached to the toe end of the head opposite to that of a conventional putter. The putter head is now closer to the golfer making it easier for the golfer to get over the putt. The shaft is at an acute angle to the heel position and extends directly over the length of putter head in direction away from the toe. Attaching the shaft in this position causes the shaft to extend back over putter head, thus crossing the centerline mark on the head. It also makes the shaft run parallel to the face of the putter making it easier to square the face to the target line.

The centerline mark crosses the width of the putter. An alignment mark is placed on the top of the shaft directly over the position the shaft crosses the centerline mark.

A golfer lines the putter face at a right angle to the desired path the ball is to travel. Then aligns the alignment mark on the top of the shaft to the centerline mark on the head, the putter head becomes square to the target line and brings the golfer's eyes perpendicular over the putt as they should be. In effect, the club shaft is used as part of the aiming arrangement both to assist a golfer in squaring the putter and to correctly set up the golfer over a putt.

#### Drawings

In the drawings, which form a part of this specification.

Fig. 1 is side view of the face of a right-handed putter with the shaft attached towards the toe. The numbers in this drawing represent the following part of the putter,

- 1 - Shaft
- 2 - Alignment mark on top of the shaft which lines up with the centerline on the head
- 3 - Centerline on top of putter head
- 4 - Toe
- 5 - Heel
- 6 - Face
- 8 - Sole

Fig. 2 is a top view of a left-handed putter. The numbers in the drawing represent the same parts, as in Fig. 1 the only different number is 7 - Back.

Fig. 3 shows a golfer positioned over a putter using this system of putting alignment. It shows the putter pointing towards the golfer with the golfer's eyes clearly over the putter.

**CLAIMS****Title of Invention – Golf Putting Alignment System**

The embodiment of the invention in which an exclusive property or privilege is claimed are defined as follows:

1. A golf putting alignment system that uses two reference marks, one on the putter's head and one on the putter's shaft that indicates to a golfer when their eyes are perpendicular over the center of a putter head when the putter is in the putting position.
2. This position of having the golfer's eyes perpendicularly over the putter center can only be achieved by having two points of reference or marks, which line up vertically with one another. The first reference point is marked on the putter head and the second is directly above it.
3. To achieve a perpendicular alignment of the marks, one of the marks is on the center top of the putter head running from the face to the back. The second mark can only be placed on the putter's shaft where the shaft crosses the centerline of the putter head, as viewed from above.
4. The putter shaft must attached to the putter between the toe and the centerline of the putter and extend back over the putter head so that the second mark can be applied to the shaft in a position that is directly above the centerline mark.
5. The exact position of the second mark on the putter shaft is determined by projecting a perpendicular line from the centerline of the putter head to where it intersects the shaft. It is at this intersection that the second mark is placed on the shaft. This is the only point on the shaft where a mark can be made that enables the golfer's sight line to be perpendicular to the centerline of the putter head.
6. Golfers now only have to visually align the mark on the shaft to the centerline mark on the putter head to know that they now have their eyes perpendicular over the putter head.
7. Any putter can be modified to use this system by moving the shaft forward of the centerline and attaching it so that it extends back over the length of the putter head. A mark is then placed on the shaft at a point that is perpendicular to the centerline as describes in claim 5.

(54) Title: GOLF PUTTING ALIGNMENT SYSTEM

(57) **Abstract:** A putting system using an alignment mark (2) on the top of a shaft in relation to the centerline mark (3) on the putter head. A golf putting alignment system that has a putter, which has the shaft (1) attached to the head of the putter between the centerline mark (3) and the toe (4) of the putter. The putter head is now closer to the golfer making it easier for the golfer to get over a putt. The shaft (1) is at an acute angle to the heel position and extends directly over the length of putter head in direction away from the toe. Attaching the shaft in this position causes the shaft to extend back over putter head, thus crossing the centerline mark (3) on the head. An alignment mark (2) is placed on the shaft directly over the position the shaft crosses the centerline mark (3). The golfer lines the putter's face (6) square to the desired path the ball is to travel. The golfer then aligns the alignment mark (2) on the shaft to the centerline mark (3) on the head, the putter head becomes square to the target line and brings the golfer's eyes perpendicular over the putt as it should be.

## CLAIMS

**Title of Invention - Inseyed Putting Alignment System**

The embodiment of the invention in which an exclusive property or privilege is claimed are defined as follows:

1. A golf putting alignment system where a putter comprises:
  - an elongated club shaft having a grip on one end and the other end is attached to a putter head at a junction between the centerline mark and the toe,
  - the putter head points towards the golfer making it easier for the golfer to get his/her eyes over the putter and ball as opposed to a conventional putter where the putter head points away from the golfer.
  - the said putter head having a striking face and having a heel and a toe on the opposite sides of said junction,
  - the said putter head also has a back, top and sole.
2. The head has a centerline mark running the width of it and perpendicular to the face and is positioned at the desired area of putter to ball contact.
3. The said shaft is attached at an acute angle to the heel position and extends directly over the length of putter head in direction away from the toe and parallel to the face.
4. Attaching the shaft in this position causes the shaft to extend back over putter head, thus crossing the centerline mark on the head.
5. An alignment mark is placed on the top of the shaft directly over the position the shaft crosses the centerline mark.
6. The putting system using an alignment mark on the top of a shaft in relation to the centerline mark on the putter head
7. When the alignment mark on the top of the shaft is aligned to the centerline mark on the head, the putter head becomes square to the target line and brings the golfer's eyes perpendicular over the putter and ball as they should be.
8. This alignment system can be used on different types of putter heads such as blade, mallets or heel toe weighted.
9. This alignment system can be used for left-hand or right-hand putters.
10. This alignment system can be used when a shaft is attached by a neck that allows for the shaft to run parallel to the face either in the back or front of the putter. The key is that the shaft has to be attached between the centerline mark and the toe.

**CLAIMS****Title of Invention – Golf Putting Alignment System**

The embodiment of the invention in which an exclusive property or privilege is claimed are defined as follows:

1. A golf putting alignment system that uses two reference marks, one on the putter's head and one on the putter's shaft that indicates to a golfer when their eyes are perpendicular over the center of a putter head when the putter is in the putting position.
2. This position of having the golfer's eyes perpendicularly over the putter center can only be achieved by having two points of reference or marks, which line up vertically with one another. The first reference point is marked on the putter head and the second is directly above it.
3. To achieve a perpendicular alignment of the marks, one of the marks is on the center top of the putter head running from the face to the back. The second mark can only be placed on the putter's shaft where the shaft crosses the centerline of the putter head, as viewed from above.
4. The putter shaft must attached to the putter between the toe and the centerline of the putter and extend back over the putter head so that the second mark can be applied to the shaft in a position that is directly above the centerline mark.
5. The exact position of the second mark on the putter shaft is determined by projecting a perpendicular line from the centerline of the putter head to where it intersects the shaft. It is at this intersection that the second mark is placed on the shaft. This is the only point on the shaft where a mark can be made that enables the golfer's sight line to be perpendicular to the centerline of the putter head.
6. Golfers now only have to visually align the mark on the shaft to the centerline mark on the putter head to know that they now have their eyes perpendicular over the putter head.
7. Any putter can be modified to use this system by moving the shaft forward of the centerline and attaching it so that it extends back over the length of the putter head. A mark is then placed on the shaft at a point that is perpendicular to the centerline as describes in claim 5.

**CLAIMS**

**Title of Invention – Inseyed Putting Alignment System**

The embodiment of the invention in which an exclusive property is claimed, are defined as follows:

1. A golf putting alignment system that aligns a golfer's eyes perpendicular over the centerline of a putter, the said alignment system is applied to a putter that has a shaft attached near the toe of a putter head and extends up and across the center line and passes over the heel, the said putting alignment system uses two reference marks, the first mark being the centerline on a putter's head and the second mark being a corresponding mark on the top of a putter's shaft perpendicular to the centerline mark below, the only point on the top shaft that can be used for the second line is the point perpendicular from the centerline, when the two lines are visually aligned it indicates to a golfer that their eyes are perpendicular over the center of a putters head when a putter is in the putting position.
